1.0 Description of threshold levels and short names

Product Total Mass [mg] = for Wafer Fab: weight of the wafer, for Assembly company: weight of the Integrated Circuit

Weight (1) = Report the **biggest content rate** (ppm) of the substance at the **homogeneous material level**.

Weight = weight of the substance in the homogeneous material that has the biggest content rate of the substance. Inform also the name of the homogeneous material.

Content rate [ppm] = Content rate of the substance in the homogeneous material that has the biggest ppm content of the substance.

Example (RoHS): Lead (Pb) content in lead frame plating [ppm] = $10^6 * (\text{weight of Pb in the leadframe plating material}) / (\text{total weight of the leadframe plating material})$

Product Total Mass = 180 mg, weight of the lead frame plating = 3.0 mg and weight of Pb in the leadframe plating = 0.03 mg

then "Weight [mg]" -field data = "0.03mg" and "Content rate [ppm]"-field data = "10 000 ppm" ($=0.03 \text{ mg} * 10^6 / 3.0 \text{ mg} = 1.0 \%$)

other homogeneous materials (mold compound, lead frame, epoxy, bonding wire, die) do not have lead (Pb) or the content rate is below the RoHS threshold limit.

because RoHS threshold level is 0.1 % Weight (1) for Pb, then "Additional information..." -field data = "Lead frame plating = 3.0 mg. The Pb content in the Lead frame plating is above the Threshold Level"

Weight (2) = Report the total **weight** of the substance **in the product**.

Weight [mg] = total weight of the substance in the product.

Content rate [ppm] = Content rate of the substance in the product.

Example (REACH): Lead (Pb, included 27.6.2018 to SVHC), in case of previous example,

"Weight [mg]" -field data = "0.03 mg" and "Content rate [ppm]"-field data = "166,7 ppm" ($=0.03 \text{ mg} * 10^6 / 180 \text{ mg} = 0.1667 \%$)

and because REACH threshold level for the Pb is 0.1 % Weight (2), then "Weight [mg]", "Content rate [ppm]" and "Additional information..." -fields can be left empty.

0.1 mass % = 1000 ppm, applies also to 0.1 % Weight (1) and 0.1 % Weight (2)

Intentionally added = the substance is deliberately added or included to the product.

Any content = Not contain obviously OR under quantitation limit of accurate analytical method.

NA = Not Applicable.

... or ... = if there are two Threshold Levels, for example "Intentionally added or 0.1 % Weight (2)" then the both threshold levels need to be checked. Reporting is required if one or both thresholds are exceeded.

2.0 RoHS

RoHS 1 directive (2002/95/EC), RoHS 2 directive (2011/65/EU) and RoHS 2 amendment (2015/863).
